

Mechanical Fabrication Assembly Training| eLearning Course

Torque Wrench - W19004-XA07UEN-E1

Objective 4: Describe the Operation of a Click-Type Torque Wrench

Torque Wrench Components

A click-type torque wrench consists of three basic components:

- Handle
- Tube
- Drive End

Click on each of the click-type torque wrench basic components for more information.

eLearning Course: M19004

The foundations of mechanical fabrication rest upon a variety of mechanical assembly skills, including the proper use of various hand tools. Amatrol's Multimedia Courseware - Mechanical Fabrication (M19004) teaches learners essential mechanical assembly skills applicable throughout modern industry. Learners using Amatrol's mechanical assembly skills eLearning course begin by studying pliers, mallets, locking devices, pneumatic fittings, and threaded and non-threaded fasteners. From these building blocks, learners begin practicing industry-relevant assembly skills, such as using hand tools like wrenches, screwdrivers, torque wrenches, and portable power tools.

Teach Mechanical Fabrication Skills

Comprehensive Mechanical Assembly Skills Curriculum Connected to Real-World Skills

Amatrol's eLearning curriculum is unique in that it thoughtfully combines in-depth theoretical knowledge with practical, hands-on skills. This powerful combination of knowledge and skills solidifies understanding and creates a strong foundation for pursuing more advanced skills.

For example, the mechanical assembly skills eLearning course covers important topics, such as:

Threaded Fasteners

Learners begin with an introduction to threaded fasteners, including assembly concepts, bolts, and washers. Individual lessons focus on topics like categories of threaded fasteners, bolt types and sizes, and types of washers. Learners will also practice skills, such as identifying bolt type given a sample, identifying US customary bolt grade given a sample, and identifying washer type given a sample.

Wrenches

Learners will study the components and operation of wrenches, including fixed, adjustable, Allen, and ratchet wrenches. Individual lessons focus on topics like types of fastener compounds, wrench safety rules, and the

sequence used to tighten bolts arranged in a pattern. Learners will also practice skills, such as inspecting and installing a threaded fastener and using an adjustable wrench to tighten a threaded fastener.

Pneumatic System Fabrication

Learners using Amatrol's mechanical assembly skills eLearning course will study basic principles of pneumatic system fabrication, including fluid circuit and pipe thread components and pneumatic fittings and tubing. Individual lessons focus on topics like types of pneumatic system conductors, styles of pneumatic fittings, and how to install pipe thread fittings. Learners will also practice skills, such as installing a barb fitting onto a rubber hose, identifying fitting type and style given an example, and installing a ferrule-type fitting onto pneumatic tubing.

Screwdrivers

Learners will study various aspects and components of screwdrivers, including screws, types of screwdrivers, and nut drivers. Individual lessons focus on topics like how machine screws are designated, screwdriver safety rules, and the construction of a nut driver. Learners will also practice skills, such as identifying a screw type and size given a sample, using a Phillips head screwdriver to tighten a threaded fastener, and using a nut driver to tighten a threaded fastener.

Pliers and Locking Devices

Learners using Amatrol's mechanical assembly skills eLearning course will study pliers and locking devices, including clamps, vises, and rings. Individual lessons focus on topics like how to use a C-clamp to hold parts during assembly, the operation of a cotter pin, and how to use twisted safety wire to lock a nut. Learners will also practice skills, such as using a vise to hold parts during assembly, identifying a nut locking device given a sample, and installing a snap ring.

Mallets and Non-Threaded Fasteners

Learners will study the components and operation of mallets and non-threaded fasteners, including fasteners, pins, and press fit assembly. Individual lessons focus on topics like types of hammers, how keys and keyseats are sized, and the operation of various types of pins. Learners will also practice skills, such as using a dead blow hammer to perform an assembly task, assembling two parts using a key fastener, and identifying a pin type given a sample.

Torque Wrench

Learners using Amatrol's mechanical assembly skills eLearning course will study basic principles of torque wrenches, including process control concepts and applications. Individual lessons focus on topics like how torque is calculated, categories of torque-controlled tools, and common errors that result in improper fastener torque. Learners will also practice skills, such as calculating torque using the torque formula, using a manual torque wrench to tighten a fastener to a specified torque, and using a torque wrench and backup wrench to tighten fasteners.

Portable Power Tools

Learners will study various aspects and components of portable power tools, including portable drills/drivers. Individual lessons focus on topics like portable power tool safety, types of battery-operated tools, and how to install tooling in a drill/driver. Learners will also practice skills, such as identifying portable power tool hazards, operating a battery-operated drill/driver, and using a portable drill/driver to tighten fasteners.

Interactive eLearning

In-Depth eLearning Curriculum Connected to Real-World Skills

Amatrol's eLearning curriculum is unique in that it thoughtfully combines in-depth theoretical knowledge with practical, hands-on skills. This powerful combination of knowledge and skills solidifies understanding and creates a strong foundation for pursuing more advanced skills. Amatrol's eLearning integrates various types of learning methods to create an engaging, effective learning experience. Amatrol's multimedia [eLearning](#) curriculum includes text with voiceovers, videos, 3D animations, pictures, and interactive activities, quizzes, and self-reviews.

Free Learning Management System (LMS)

Amatrol eLearning is easy-to-use for both students and instructors. Its web-based interface is simple to navigate and available on any WebGL-compatible Internet browser. Instructors love Amatrol eLearning for its simple, yet sophisticated Learning Management System (LMS). The LMS allows instructors to create custom courses, monitor student participation, track course progress, assess knowledge levels prior to a course, and test knowledge levels after completion. Learners appreciate the fact that they can start and stop as needed, moving through each Amatrol course at their own pace. If a self-review reveals that they didn't understand a particular topic as well as they thought they did, they can revisit it before moving on.
