The screenshot displays the eLearning eBook interface for 'Pneumatic Troubleshooting'. The top navigation bar includes a table of contents, page number (8 of 76), and zoom controls (100%). The left sidebar contains a detailed table of contents with sections like 'Segment 1: Pneumatic Troubleshooting Concepts', 'Segment 2: Safety', and 'Segment 3: In-Circuit Pneumatic Component Testing'. The main content area is titled 'Out-of-Circuit Testing' and includes a definition, a procedure for testing a directional control valve, and a diagram of a bench testing setup. The right sidebar features 'Activity 1: Pneumatic system identification' with a 'Procedure Overview' and an image of the 'Amatrol 950-PT1 Pneumatic Troubleshooting System'.

eLearning Course: EB546

Understanding how to troubleshoot problems that arise in pneumatic systems is a vital industrial skill that is irreplaceable for maintenance technicians and others in industrial settings. Amatrol's Pneumatic Troubleshooting eLearning provides a strong understanding of troubleshooting areas such as air preparation, pneumatic cylinders, motor and rotary actuator, directional control and flow control valves, etc. Within this curriculum, learners will study topics like: in-circuit pneumatic component testing; air-over-oil system operation; rotary actuator operation; quick exhaust valves; vacuum switch operation; and troubleshooting machine performance faults. Teach Pneumatic Troubleshooting

What is Pneumatic Troubleshooting?

Pneumatic troubleshooting is the process of finding the cause, or fault, that has created a malfunction in a pneumatically-powered machine. Faults can cause a machine to do many things. For example, the fault could cause the machine to stop, skip a step, or perform a step incorrectly. A symptom is the malfunction you observe caused by a fault. Troubleshooting is one of the most important pneumatic skills a technician must possess, because machine downtime can be very expensive. Faults must be located and corrected quickly so that the machine is operational as soon as possible.
